

**NON-LIFE THREATENING
LATEX REACTION**

Student's Name / School / Grade / Reaction

When a child with a latex reaction is suspected of coming in contact with latex:

- 1) Monitor the child for signs of respiratory distress.*
- 2) Give Benadryl if available for child.
- 3) Notify parent. If unable to reach parent, notify emergency contact.
- 4) If signs of respiratory distress occur, give Epinephrine if available.

Brand of Epinephrine

- 5) Call 911.
- 6) Document symptoms and reaction.

Parent's Phone Number

Emergency Contact's Phone Number

*Signs of respiratory distress: Coughing/Wheezing, Throat tightness, Swelling of the lips, tongue, mouth, Shortness of breath, Blue lips.

I understand the above procedure will be followed in the event my child comes in contact with latex.
